MADE POSSIBLE THROUGH A GRANT FROM THE NYS DEPARTMENT OF LABOR HAZARD ABATEMENT BOARD

DATE: ~~MARCH 24, 2010~~ – CANCELLED
TIME: 8:00AM-12:00PM

Price:
SBE MEMBERS: Free

Asbestos

In the construction industry, asbestos is found in products such as sprayed-on fireproofing, pipe insulation and floor tiles to name a few. Most worker exposures occur during the removal of asbestos and the renovation and maintenance of buildings and structures containing asbestos. Many Contractors are not aware that they are required to test material prior to any disturbance regardless of when the building was built.

Lead

Lead overexposure is one of the most common overexposures found in the industry and is a leading cause of workplace illness. Those at risk for lead exposure include iron workers, demolition, painting, lead-based paint abatement, plumbing, heating and air conditioning, electrical work and carpentry.

Mold

Mold requires water to grow so it is important to prevent excessive moisture in buildings, such as roof leaks, landscaping or gutters that direct water into or under a building. Delayed or insufficient maintenance could contribute to moisture problems in structures.

Learn about these hazards and how to identify, prevent and remediate the existence of each of them and how to protect your employees from future exposure.

Instructor:

Craig Zinserling has been in the environmental contracting business for nearly two decades. He holds several licenses and certificates including Asbestos Contractors License, Certified NYS Microbial Trainer, Certified Microbial Consultant, Council-Certified Microbial Investigator and Council-Certified Microbial Remediation Supervisor.
