

2022 National Work Zone Awareness Week, April 11-15 – Work Zones are a Sign to Slow Down

As our highway infrastructure ages, the federal government and many highway agencies are focusing on rebuilding existing roadways, bridges, and tunnels. Highway improvement projects being performed on roadways that are open to traffic will be increasing. At the same time, traffic continues to grow and creates more congestion. This combination of more work zones and heavier traffic results in increased risk for the motorist and work zone workers. With this in mind, drivers must pay extra attention in work zones and take every precaution to keep themselves, other travelers and work zone workers safe so that everyone can arrive home safely at the end of the day.

Many factors contribute to work zone accidents, including speeding, cell phone use and inattentive, distracted, or aggressive driving. All of these behaviors are discouraged when driving on any road, but they can be especially dangerous in work zones. Many of the fatal crashes in work zones involve rear-end collisions. Rear-end collision involvement in fatal work zone crashes is consistently higher on rural roadways than urban roadways. In fact, nearly 40 percent of fatal work zone crashes on rural interstates involve a rear-end collision, compared to only about 18 percent of non-work zone fatal crashes on those facilities.

Nationally there were approximately 115,000 total work zone crashes, resulting in approximately 39,000 injuries. Of that total, there were 762 fatal work zone crashes, resulting in 842 fatalities. 135 of those fatalities were workers.

For the latest three years of available data (2017-2019), over 60 percent of the transportation incidents resulting in a worker fatality at a road construction site involved a worker on foot being struck by a vehicle. For the remaining 40 percent of the transportation incidents, the worker fatality was either a driver or occupant of a vehicle involved in the incident.

With the construction season about to begin, The National Work Zone Safety Awareness Week serves as an opportune time to remind motorists to be extra vigilant when driving through a work zone.

National Work Zone Awareness Week is designated by the Federal Highway Administration to raise driver awareness and reduce the number of vehicle intrusions into work zones, incidents that can cause injuries and fatalities.

This year's safety campaign theme, Work Zone Safety: Work Zones are a Sign to Slow Down, highlights motorists' responsibility to be alert and obey posted work zone speed restrictions. Highway work zones often have reduced speed limits, closed or shifted traffic lanes and people working on or near the road, making it that much more important for motorists to be aware of their surroundings.

In an attempt, to keep NY highway construction workers safe, work zone safety cameras will be installed in 30 work zones throughout the state. This 5-year pilot program will automatically issue speeding tickets to work zone speed violators. These WZ safety cameras are to be turned on when workers are present in the work zone,

While this effort may modify the driving behaviors of the motorist, it is critical that all roadway construction contractors plan and establish their work zones in adherence with those standards set forth in the Manual of Uniform Traffic Control Devices (MUTCD). A well planned and properly executed Construction Work Zone is essential for providing safe passage for pedestrians and the motoring public during maintenance and construction activities on all roadways.

On **Wednesday, April 13, 2022**, All roadway safety professionals across the country are encouraged to wear orange to proudly show their support of work zone safety. National Work Zone Awareness Week and Go Orange Day are especially important to the families of victims who have lost their lives in work zones. .

Monthly Toolbox Talk

Traffic Control - Flagging

All flaggers must be trained and certified before flagging traffic on job sites. Flaggers play a critical role in maintaining public safety and crew safety. Flaggers must be prepared for work with appropriate personal protective equipment, including hardhat, Class II or III retroreflective clothing, safety glasses and appropriate weather protection.

Flaggers must also be able to:

- Receive and communicate specific instructions clearly, firmly and courteously.
- Move and maneuver quickly, in order to avoid danger from errant vehicles. This means a flagger shall not be in a sitting position and no vehicles, that may obscure the flagger shall be parked near the flagging station.
- Control signaling devices (such as stop/slow paddles and flags), in order to provide clear and positive guidance to drivers approaching a temporary traffic control zone.
- Maintain situational awareness, protect the work crew and provide guidance and direction to the traveling public.

Foreman and flaggers:

- Review traffic control drawings together to ensure there is proper distance between the flaggers and the work area according to speed of traffic and the Manual on Uniform Traffic Control Devices (MUTCD) guidelines.
- Plan work coverage to allow for break time.

Foreman and crew:

- Be on notice that the flagger is there to communicate with the motoring public and YOU.
- Follow directions to stop work, look up or clear the road when directed by the flagger.
- Do not solely rely on the flagger to warn you of oncoming traffic – maintain situational awareness and be alert to traffic.

Flagger:

- Inspect all equipment before use. Illumination devices must be functioning and at full power when in use and radio batteries must be charged.
- Ensure all flaggers are operating on the same radio channel and plan for an escape area.
- Maintain visual contact with oncoming motorist, and never turn your back on traffic.

All employees have “**STOP WORK AUTHORITY**” and the ability to stop their work when they have a reasonable safety concern.
